

Actors

- Reader
- Editor
- Journalist

Functional Requirements

- As a reader, I want to view articles and newsletters. I want to be able to subscribe to specific publishers' newsletters or individual journalists' newsletters.
- As a journalist, I want to be able to view, update, delete and publish articles and newsletters. I want to be able to see the approval status of my article: if it is pending approval or has been approved by an editor. I want to be able to see if my article has been published by a publishing house.
- As an editor, I want to be able to view, update and delete articles and newsletters. I want to be able to see the list of journalists who write articles for us. I want to have articles submitted for approval where I can change the status from pending to approved.

Non-Functional Requirements

For all of these actors I would like the system to be secure(username, email, password) and fast response times. The system should be scalable so that it can handle many users, articles and newsletters.
